

Seeing red

We have just updated our [DYMAX Medical Device UV Curing Adhesives](#) webpage to offer the latest version of their selector guide – it's a download from there.

Dymax are announcing some really exciting developments in this field (more to come soon!).

[Ultra-Red™ Fluorescing Technology](#) is one. Once assembled and cured, DYMAX UV curable adhesives are usually clear and cosmetically superior.

When adhesives with **Ultra-Red** fluorescing technology are exposed to “black” UV inspection light (360-380 nm), they fluoresce bright red. The bright red fluorescence contrasts extremely well on plastics that naturally fluoresce blue in color (like PVC), and greatly assists with visual inspection of the bond-line area.

Lots of medical device manufacturers will find this a great boon!
