

## Free of charge

Such is the potential for damage from stray static-induced electricity that a vast industry has grown up providing electrostatic discharge (ESD) safe products to be used in sensitive environments. **ESD-safe, anti-static** shoes, pens, labels, bags... and just about anything else you can think of are on offer.

Sometimes, however, the exact thing that you need is not readily available in an ESD-safe version. And that's where [Licron Crystal](#) comes in.

[Licron Crystal](#) is a clear, sprayable coating which provides a permanent static dissipative surface. It can be applied to metals, plastics, glass and so on. This simple versatility means that anyone in charge of a **static controlled area** should have at least one can of Licron Crystal in their cupboard.
