

See-Cure - to be sure

Our sales partners **DYMAX** have created See-Cure technology as a visual indicator for their *UV cure adhesives* by colour changing from original blue to clear during the curing process. This innovative approach greatly aids industrial assembly processes, whether the application is medical, electronic, aerospace or automotive. In each case it is essential to know that sufficient adhesive has been dispensed and that a full cure is effected – See-Cure colour change technology enables this to be determined at a glance.
