

Clear, fast plastic bonder... including acrylic!

Araldite 2028 adhesive is a fast setting, transparent, two-part polyurethane adhesive. What makes this adhesive different is that it is both *transparent* and *UV stable*, as well as *flexible* and *fast curing*.

Araldite 2028 bonds wide varieties of plastics including polymethyl methacrylate (PMMA) and polycarbonate (PC). Tailor made for seismic cables and cable assemblies, as well as general industrial applications.

Araldite 2028 will find many applications in *bonding acrylic* sheets and parts; it is clear and quick to cure, so our customers making point-of-sale (POS) displays and signs/signage will find it invaluable.

Clear, fast plastic bonder... including acrylic!
