

# Araldite AV 170 replaces Araldite AV 119

**Araldite AV 119** is a very popular, single component, heat cure, toughened epoxy adhesive. However, due to a number of changes (including legislation and regulation) it has become increasingly difficult, if not impossible to supply.

We recommend that you look at [Araldite AV 170](#) instead.

**Araldite AV 170** is a multipurpose, one component heat curing thixotropic paste adhesive of high strength and toughness. It is suitable for bonding a wide variety of metals, temperature resistant plastics and many other materials. It cures at 140-180°C, has heat resistant to 120°C, with very good peel strength and good chemical resistance. It gap fills to 3mm.

Please [contact us](#) if you would like a quotation.
