

Dispensing onto round, circular or cylindrical objects

Description

Are you looking for an efficient method for dispensing in a circular pattern?

The [Fisnar F1300N rotary dispensing table](#) is the answer. The [F1300N](#) allows you to dispense circular patterns on a wide range of parts, including those with areas that are difficult to access. The Z-axis tilts to allow controlled rotary dispensing at an angle, either on a vertical wall within a cylindrical part, or on an outside wall. The system is fully programmable to control dispense delay, rotation delay, degree of rotation and wait period before cycling.

Features:

- Dispenses from [syringes](#), [cartridges](#) or through [dispensing valves](#) fed from a [pressure reservoir](#)
- Rotation of 0-900°
- Adjustable Z-axis including tilt control
- Variable speed table rotation
- Fully programmable for precise dispensing
