

Mix and degas under vacuum in seconds - remove 100 micron micro-bubbles

The [THINKY ARV-310](#) is an industrial non-contact “planetary” mixer for all engineering compounds. The [THINKY ARV-310](#) can mix, disperse and degas your materials in seconds to minutes, even in your own containers (jars, beakers, syringe tubes or cartridges). The *non-contact mixing* principle makes it possible to formulate compounds from very small amounts such as 0.5ml to large production scales. The ARV-310 has an *integral vacuum* for mixing and [removing micro-bubbles less than 100 microns](#) diameter.

We have [THINKY ARV-310](#) available for demo in our Technology Centre, so [call us now](#) to arrange a demonstration.

Mix and degas under vacuum in seconds - remove 100 micron micro-bubbles
