

# Knowing your mix is completely homogeneous and air free

We have published a [presentation](#) which gives an introduction to the [THINKY Mixing and Degassing Machines](#) as well as the concept of planetary centrifugal mixing.

[THINKY Mixers](#) are industrial non-contact “planetary” mixers for all engineering compounds. They mix, disperse and degas your materials in seconds to minutes, in a sealed or lid-less container such as a jar, beaker, syringe tube or cartridge. The non-contact mixing principle makes it possible to formulate or combine compounds from very small amounts such as 0.5ml to large production scales.

By means of both rotation and revolution of the material in a container, materials are mixed and degassed. The materials are under an acceleration of 400G, and even materials of very high viscosity can be mixed and deaerated or degassed at the same time.

You will have peace of mind knowing that each mix is completely homogeneous and air free.
