

Mixing for high SG powders like LED fluorescent additives - **THINKY ARV-310LED**

The **THINKY ARV-310LED** is a variation on our standard **ARV-310** mixer. It is specifically designed for uniform dispersion of high SG materials such as fluorescent additives for LEDs, allowing mixing without settling in low viscosity silicone resins. The rotation-revolution ratio of the **THINKY ARV-310LED** is optimized for this purpose. When used for fluorescent materials, several grams to a maximum of 100g of materials can be dispersed and deaerated.
