

New Dymax industrial adhesives product selector guide

The new [**Dymax Industrial Adhesives Product Selector Guide**](#) is available to download and features products for use with glass, plastic and metal.

The guide includes a helpful table which clearly lays out product specifications and allows comparison between different adhesives.

Dymax light-curable materials cure in seconds upon exposure to UV/visible light, form high-strength, environmentally resistant bonds to glass, metal, and plastic substrates, and are ideal for bonding dissimilar materials. Formulations with activators and secondary heat or moisture cure are also available.

We combine these light curing adhesives with appropriate [**dispensing**](#) and [**curing**](#) equipment. These systems work with light-curable adhesives to gain process efficiency by targeting rapid surface curing, depth of cure, and speed of cure all while delivering light in a quick and economical way.
