

UV blocking smooth flow tapered dispensing tips

Smooth flow tapered dispensing tips allow for the dispensing of medium to high viscosity fluids and liquids without clogging or blocking. Read our [25 Top Dispensing Tips](#) for more information.

If you are dispensing materials which are light curing or sensitive to light, then our [UV blocking range of tapered dispensing tips](#) might just be what you need. The **colour coded** tips allow for easy distinction between gauge sizes and are moulded from a high density polyethylene with a UV block additive. The double helix, luer lock hub fits securely to standard dispensing syringes and cartridges.
