

# How to get started with your THINKY ARE-250 mixing and degassing machine

The latest addition to our [YouTube channel](#) features an explanation of just how quick and easy it is to get going with a [THINKY mixing and degassing machine](#).

**THINKY** Mixers are industrial non-contact “planetary” mixers for all engineering compounds. They **mix, disperse and degas your materials in seconds to minutes**, in a sealed or lid-less container such as a jar, beaker, syringe tube or cartridge. The machines make light work of formulating and mixing adhesives, sealants, moulding compounds, lubricants, slurries, coatings, inks, paints, abrasives, bio chemicals, cements, medical compounds, cosmetics/personal care materials, detergents, conductive pastes, dental materials, foods, construction materials or any other materials which are hard to mix, hard to degas, or hard to wet.

The THINKY mixing and degassing machines range from the [ARE-250](#) with the capacity for up to 310g material, up to the [ARV-10KTWIN](#) with a maximum capacity of 10kg, with [vacuum options](#) also available.

If you're looking to **mix materials with consistent and uniform results**, get in touch with us to [organise a demonstration](#) and further information on the **THINKY Mixing and Degassing Machines**

.
