

Get hands-on with trials and demos for adhesives and equipment

For years, we have helped our customers develop their production through evaluation and specification of new assembly materials and equipment at our [Technology Centre](#), located in Kidlington, Oxfordshire.

Filled to the brim with mixing, surface treatment, dispensing, robots and curing equipment, along with a warehouse full of materials, our Centre allows us to help you specify materials and develop robust processes for projects large and small.

Like us, we know that many of you relish the opportunity to get hands-on and to try things out for yourselves, so we would love to host you at our premises for detailed discussions about material choices, product trials or equipment demonstrations. And you will get to see the full array of options suitable for your review.

Here is Kevin Cook, our Technical Manager, [inviting you to visit](#).

Whether you are developing production for a new product, or improving an existing one, our technical specialists are on-hand to help you decide if a material or process is right for your application. We'll also charge up your car. [Please get in touch to arrange a visit](#).
