

#### **Description**

THINKY containers and adapters are designed to help optimise material processing in <a href="https://example.com/en/state-number-2">THINKY</a> planetary mixers.

The **containers or jars** come in a variety of sizes, from 12 ml to 4000 ml, for mixing and degassing materials of different characteristics. The choice of container is very important for optimal mixing; we will recommend options for you based on your mixing needs. The mixing force is related to the diameter of the cup. Because the amount of material in the container can impact on mixing efficiency, the container size is also important.

The **adapters** are designed to hold different containers, from cups to syringes. Most containers will require an adapter in order to fit securely in the mixer.

More information is available in the <u>Thinky Container and Adapter list</u>. We offer a further selection of jars and containers, and a customer adapter design service, to meet your individual needs.

Thinky mixers are delivered with a selection of reusable containers or jars, suitable and selected for great performance for that model. All these containers are available to order separately. Pictured is the reusable 300 ml HDPE container, one which does not require an adapter.

Disposable containers are available, usually made of polypropylene. Some have screw lids, some are open topped. Suitable adapters are available for all of the containers we stock. Pictured is the 240 ml polypropylene jar & cap, which is also available in a clear version.

Adapters allow containers to fit securely in the mixer. Adapters are available for each of our standard jars. We have the ability to design and make adapters for your own container.

Adapters are available for dispensing syringes and cartridges. Filled syringes can be degassed in the Thinky mixer.

#### **Features & Benefits**

- A range of containers to suit the type and volume of materials
- A variety of adapters best suited to work alongside the containers
- Containers and adapters created to optimise material processing
- Custom-made adapters available based on your operating environment and the material characteristics

#### **Custom Adapters**

Our in-house technical team are able to produce custom adapters to suit your own containers and the THINKY machine you are using. Here is a <u>3D model example of an adapter</u> that we have printed. Our 3D printed adapters are made from carbon filled nylon, which we have extensively tested. For more information or to discuss your requirements, <u>please get in touch</u> with a member of our technical sales team.
